Dear Prof. Suyanto,

Subject: Essay Competition on "Achieving Food Security in times of crisis"

I would like to inform you that FAO Staff Cooperative has launched an Essay Competition as one of its activities to mark World Food Day in 2009, the theme is the "Achieving Food Security in times of crisis". We would greatly appreciate your assistance in distributing to the junior and senior high schools and encouraging them to join the completion which will be done every two years.

I attach herewith the Information Note for 2009 issued by the World Food Day Secretariat which gives some important background which could be useful to the students who wish to participate. The essays should give their own ideas and vision on Achieving Food Security in times of crisis and also their suggestions for combating hunger in the world. The details of the competition are given in the sheet attached to this letter. The deadline for submission is on **9 November 2009**.

An important innovation this year is that the competition is divided up into two age groups, namely junior and senior secondary school levels. The essay should be sent to our office, preferably by email attachment.

Your kind cooperation is highly appreciated.

With kind regards,

Yours sincerely,

Man Ho So
FAO Representative in Indonesia

Prof. Suyanto, Ph.D.
Director General
DG of Elementary & Secondary Education Management
Ministry of National Education
Jakarta

Cc.: Mr. Farid Hasan Baktir, Director, International Cooperation Bureau, Ministry of Agriculture

International Essay Competition for Secondary Schools on WFD 2009 theme

- Title:** Achieving food security in times of crisis
- Launch:** 10 August 2009
- Deadline for receipt of essays:** 15 November 2009
- Where:** All Secondary schools in Italy and in FAO Member States
- Languages:** English, French, Spanish, Italian, Arabic, Chinese and Russian
- Age groups:** Two categories: (a) 11 to 14 years and (b) 15 to 17 years
- Posting of results:** January 2010. The 12 winning essays will be published in the FAO Casa Gazette.
- Prizes (two sets):**
1st - US\$ 500 and WFD 2009 bronze medal
2nd - US\$ 400 and WFD 2009 bronze medal
3rd - US\$ 300 and WFD 2009 bronze medal
- Consolation prizes:**
4th - WFD 2009 bronze medal and books to school library
5th - WFD 2009 bronze medal and books to school library
6th - WFD 2009 bronze medal and books to school library
- Structure of essays:** 450 words
Name and surname of students
Name and complete address of secondary school
Introduction - body of essay - conclusion with suggestions and/or proposals for achieving food security
Essays should be neatly and clearly handwritten or typed
Date and signature of student at end of essay

Background material

World Food Day 2009 Newsletters and material in the seven languages and the cartoon publication titled "the Right to Food" published in 2007

Additional important details:

A maximum of 10 essays will be accepted from each secondary school participating; it is therefore important that teachers/schools screen essays and choose the best for submission to the competition. They should not show marks received from their schools.

Seven (7) commissions will be established to mark and judge the essays in the seven FAO official languages - at least three (3) qualified persons on each commission. The quantity will naturally depend on the number of essays received in each language - judging to ensure that experience it is expected that the larger numbers will be in English and French. The process for marking and judging the essays and their content will be the same for all languages.

World Food Day/TeleFood 2009 Information Sheet

Achieving Food Security in Times of Crisis

At a time when the global economic crisis dominates the news, the world needs to be reminded that not everyone works in offices and factories. The crisis is stalking the small scale farms of the world too, where 70 percent of the world's hungry live and work.

The situation in rural areas in developing countries is dire, coming in the wake of the surge in food and fuel prices in 2007–2008. This second crisis is hitting the poor while they are down. Money sent home from relatives working in the city or abroad has declined as unemployment bites. In small agricultural villages, the poor have already exhausted their savings to buy food.

The global economic crisis dominates the news and dominates government agendas. Trillions of dollars are being spent to resuscitate wealthy economies, but who will bail out the poor?

This paper explores how the economic crisis is affecting developing countries, how they can protect the most vulnerable from hunger and how investment could stockproof the agriculture sector against future crises and even enable poor farmers to profit from higher food prices. This is not the world's first recession. There are lessons to be learned from how countries defended food security during past shocks in order to be better prepared for the future.

Food crisis and financial crisis

The FAO food price index rose, on average, by 57 percent from mid 2007 to mid 2008. The number of hungry in the world increased by 75 million in 2007. Then, in July 2008, food prices began to decline. The downward trend should not be interpreted as the end of the food crisis. Global cereal prices are still more than 63 percent higher than they were in 2005, according to the International Monetary Fund. The same factors that caused the food crisis, in the first place are still present:

- Agricultural productivity is low.
- The population growth rate is still high in many of the most food insecure countries.
- Water availability and land tenure are significant problems.
- The frequency of floods and droughts is above long-term averages.
- Investments in agricultural research and development are much lower than what is recommended by experts and are not directed toward the most important crops for the poor.

After the food price crisis came the global economic slump. Because the slump led to reduced wages and employment, the poor are now facing two simultaneous crises.

To make matters worse, many of the coping mechanisms used by the poor to deal with the food crisis have already reached their limits. For example, selling assets to moderate a fall in consumption is now difficult because many assets have already been sold. Migration is more difficult because the developed countries are facing their own slump. Borrowing to finance consumption is hampered by tighter credit markets.

A slowdown in foreign direct investment and declining exports of primary commodities are expected to increase unemployment in poor countries. The economic outlook of the rich countries is such that development support and humanitarian assistance are expected to decline.

In 2008, officially recorded remittances accounted for around US\$300 billion, or two percent of the Gross Domestic Product of developing countries as a group, according to the World Bank. The economic slowdown, particularly in the construction and manufacturing sectors – traditionally major employers of immigrant workers – is a cause of a decline in remittances sent home to poor families in both rural and urban settings.

Protecting the most vulnerable

Apart from longer-term development assistance to agriculture, which will be examined below, it is clear that the most vulnerable members of society need help now. The following review of public policy intervention illustrates that even in times of crisis, people can be saved from the worst effects of hunger and malnutrition.

- The first step in reaching the hungry is to know their identity, location and situation. Food price monitoring helps governments to keep tabs on hunger hotspots both within countries and communities. Safety nets can then catch the most vulnerable. Options include food distribution programmes, cash transfer schemes, various feeding programmes and employment schemes.

- Social programmes for the hungry must be designed carefully to suit the circumstances. For example, cash transfers or food stamps improve access to food where food markets work and where improved ability to purchase food is the objective. If food markets are not working well, as in remote or war-torn areas, direct food aid or "food for work" might be appropriate.
- "Productive safety nets" can also play an important role. For example, in Malawi and Ethiopia, subsidies to seeds and fertilizer and innovative approaches to crop insurance have become part of social protection.
- A country that experiences a growth slowdown of 4 percent due to the crisis can expect up to a 2 percent increase in child malnutrition. In order to fight micronutrient deficiencies in children and other vulnerable groups like pregnant or lactating women, food programmes should try to maintain or improve dietary diversity, or even distribute micronutrient supplements or fortified foods. Older children may need school feeding programmes. Longer-term measures include supporting small-scale food industries to produce quality weaning food; supporting and promoting breastfeeding; providing adequate nutrition education and monitoring children's growth.

Investing in agriculture

Global cereal production in 2008 reached a record high of an estimated 2 245 million tonnes, about 10 percent above annual projected needs and to allow a modest replenishment of world stocks. However, the increase was accomplished by the developed countries. In response to more attractive prices, they increased their cereal output by 11 percent. The developing countries, by contrast, only recorded an increase of 1.1 percent; in fact, if we exclude China, India and Brazil from the group, production in the rest of the developing world actually fell by 0.3 percent.

The poorest and most food-insecure farmers, who most needed to profit from higher cereal prices, could not respond to the opportunity and expand production because of lack of access to inputs or marketing opportunities.

FAO calculates that agriculture in developing countries needs US\$30 billion a year in investment to help farmers. Such a level of investment is needed to achieve the 1996 World Food Summit goal of reducing the number of hungry people by half by 2015. That amount is low when contrasted with US\$365 billion spent in 2007 to support agriculture in the rich countries, US\$1 340 billion spent by the world each year on armaments and billions of dollars found in short order in 2008–2009 to prop up the financial sector.

- Investments of US\$30 billion a year would generate an overall annual benefit of US\$120 billion. This would:
- improve agricultural productivity and enhance livelihoods and food security in poor rural communities;
 - develop and conserve natural resources;
 - expand and improve rural infrastructure and broaden market access;
 - strengthen capacity for knowledge generation and dissemination;
 - ensure access to food for the most needy through safety nets and other direct assistance.

Both public and private investments are needed, more specifically through targeted public investment to encourage and facilitate private investment, especially by farmers themselves. For example, a new public road in a fertile region makes private investments profitable in that same region.

With an estimated increase of 105 million hungry people in 2009, there are now 1.02 billion malnourished people in the world, meaning that almost one sixth of all humanity is suffering from hunger.

On the occasion of World Food Week and World Food Day 2009, let us reflect on these numbers and the human suffering behind them. Crisis or no crisis, we have the know-how to do something about hunger. We also have the ability to find money to solve problems when we consider them important. Let us work together to make sure hunger is recognized as a critical problem, and solve it. The World Food Summit proposed by FAO for November 2009 could be fundamental for eradicating hunger.
